

Enes Orhan Backend & Mobile Engineer

enesorhann404@gmail.com • linkedin.com/in/enesorhann • github.com/enesorhann • enesorhan.com

Summary

Backend & Mobile Engineer experienced in building scalable production systems operating on 14M+ product records and large-scale e-commerce datasets. Specialized in high-performance API design (200ms average response), ML-powered microservices, and Kubernetes-based deployments (kubeadm). Own the backend lifecycle from architecture and performance optimization to production debugging and release management. Delivered mobile applications with 10,000+ downloads and supported B2B systems serving thousands of organizations.

Key Achievements

- Optimized backend systems operating on 14M+ product records, reducing average API response time from 450ms to 200ms.
- Contributed to production systems containing 12M+ images, 529K+ categories, 182K+ brands, and 3,344 stores.
- Built ML-powered category matching microservice achieving 95% accuracy.
- Engineered FAISS-based vector search pipeline with Redis caching to improve lookup latency.
- Identified and resolved subscription validation logic allowing expired premium users to retain access.
- Provisioned Kubernetes clusters using kubeadm and diagnosed pod failures via kubectl.
- Released and maintained mobile applications with 10,000+ total downloads.
- Designed and operated self-hosted mail infrastructure (SPF, DKIM, DMARC).

Experience

Freelance Software Developer

Backend Engineer

Remote

Oct 2025 – Present

- Architected multi-tenant Django REST backend supporting 3,000+ companies with RBAC-based business workflows.
- Designed backend workflows for 100 active users handling organization-based financial operations.
- Prepared backend payment infrastructure for Param and PayTR integrations, designing transaction validation and callback handling logic.
- Implemented asynchronous background processing using Celery + Redis.
- Integrated Elasticsearch-based filtering and search systems.
- Designed and operated production-grade mail server (Postfix + Dovecot) with full email authentication stack.
- Provisioned and configured Kubernetes clusters using kubeadm; managed deployments and production debugging via kubectl.
- Delivered end-to-end commercial backend systems from architectural design to production release and monitoring.

Fiyator A.Ş. (Ankara, Türkiye)

Full-Stack Mobile Developer Intern

Remote

Jun 2025 – Oct 2025

- Contributed to backend systems operating on 14M+ product records, 12M+ images, 529K+ categories, and 182K+ brands.
- Supported production environment serving 456 active users, primarily company accounts.
- Reduced average API response time from 450ms to 200ms via PostgreSQL indexing and Redis caching.
- Integrated Elasticsearch enabling high-performance filtering across large-scale product datasets.
- Built ML-based category matching microservice (Django + FastAPI) achieving 95% accuracy using Semantic Transformers and Jaccard similarity.
- Designed FAISS-based vector search pipeline with Redis caching to improve category lookup performance.
- Developed FastAPI microservice leveraging Ollama (gemma3n:e2b) for intelligent product attribute extraction.
- Identified and resolved subscription validation logic issue allowing expired premium users to retain access.
- Designed secure authentication and token refresh mechanisms (JWT interceptor architecture).
- Identified and documented 45+ functional and UI/UX issues through comprehensive testing.
- Led major Flutter mobile redesign including responsive UI improvements.
- Participated in Docker-based deployments and production release cycles.

Projects

BidsForShips (B2B Platform — Freelance)

Oct 2025 – Feb 2026

- Built scalable Django REST backend supporting 3,000+ companies with RBAC-based business workflows.
- Designed backend workflows for 100 active users.
- Prepared backend payment infrastructure for Param and PayTR integrations.
- Integrated Elasticsearch-powered search and filtering infrastructure.

- Designed and operated production-grade mail server using Postfix + Dovecot.
- Deployed containerized production stack with Kubernetes and CI/CD automation.

Mail Sender Smart Edition

Sep 2025 – Present

- Built scalable bulk email management platform with template and recipient segmentation architecture (20+ active users).
- Implemented LLM-powered email template generation using Gemini 2.5 Flash, producing structured JSON-based drafts with optimized token usage.
- Designed retry-based background email delivery pipeline with scheduling logic.
- Configured self-hosted mail infrastructure ensuring secure and reliable deliverability.

Skills

Languages: Python, C#, Dart, Kotlin, Java

Backend: Django, Django REST Framework, FastAPI, ASP.NET Core, Celery

Mobile: Flutter, Firebase

Databases: PostgreSQL, SQLite, Elasticsearch, Redis

DevOps: Docker, Kubernetes (kubeadm), GitHub Actions, Linux, CI/CD, Production Debugging

Concepts: REST Architecture, RBAC, Data Modeling, Caching Strategies, ML Pipelines

Education

Konya Technical University

B.Sc. in Computer Engineering

GPA: 3.40 / 4.00

Konya, Türkiye

August 2022 – June 2026
